Technology

Our customer's primary concerns revolve around maximizing their yields by preventing mold, odor, and passing state microbial testing. AirROS purification systems solve all these issues.

Our technology cleans the air & surfaces unlike any other technology.

Locations:

- Cloning Rooms
- Mothering Rooms
- Flower Rooms
- Trim / Processing Rooms
- Drying Rooms

AirROS Benefits

- Prevents/reduces Pathogens including powdery mildew
- Reduces cross-contamination
- Pass state microbial testing
- Eliminate odor

AirROS is the latest in technology to quickly and effectively maintain all areas of production including surfaces. Without using chemicals!

Protecting Cannabis from Grower to Buyer

Our Story

SAGE Industrial Corporation began purely as a service organization maintaining air purification equipment for cold storage. SAGE Industrial Corporation recognized the need for a product line that was safer and more reliable for the perishable industry, so we spent the last decade developing a new line of purifiers based on the ROS technology and it's benefits. We also expanded the company to do the manufacturing in-house in order to ensure quality products for our customers. Our AirROS equipment line is now available to service facilities of all sizes and in multiple countries.

What We Do

SAGE Industrial Corporation manufactures, installs, and services air purification equipment for the preservation and protection of perishables. We provide protection against molds and other pathogens that may be found in the cannabis industry as well as fruits, vegetables, meat, fish, and fresh flowers.

- Ensuring Safety for All Perishables
- Lifetime Customer Support
- Certified Industry Expertise
- Reliable Equipment

Our AirROS line is the most advanced defense against bacteria, mold, and other pathogens for perishables replacing the need for chemical use.

Leader in the ROS Air Purification Industry

SAGE Industrial Corporation is the leader in innovations for the ROS (Reactive Oxygen Species) technology. We have expertise that has worked with and developed ROS system technology since 2005.
